### TriTek Releases ECM Connector Framework

#### TriTek releases ECM Connector Framework for Pegasystems SmartBPM™

**BOSTON, MA – TriTek Solutions** announced the availability of its Pega ECM Connector Framework through Pegasystems' Pega Exchange software resource library. The Connector Framework offers Pegasystems customers out-of-the-box integration of Pega SmartBPM™ with IBM FileNet Content Manager and Image Services repositories. For a no-charge perpetual license for Pegasystems customers, TriTek's Connector Framework enables enterprises to maximize the value of both best-of-breed products, the IBM Enterprise Content Management suites and Pegasystems SmartBPM™, while mitigating the need for custom code.

BPM-ECM integration through the Connector enables PegaRULES Process Commander work objects to be automatically launched and indexed with the receipt of incoming content and for that work object to display the associated content for its entire workflow lifecycle.

"The ECM Connector Framework provides Pega clients with a simple and cost-effective solution for integrating two market-leading software platforms," notes Eli Burstein, TriTek Solutions Director of Strategic Alliances.

The Pega Exchange posting of the Connector coincides with the expansion of TriTek's alliance with Pegasystems. Says Ben Frenkel, Principal of Platform-as-a-Service Commercialization, "We are very excited to have TriTek Solutions expand its Pegasystems relationship with its recent contribution to the Pega Exchange. We believe that the ECM Connector Framework will enhance the attractiveness of our platform as a whole, and expedite our customers' integrations with enterprise content management systems."

More information on TriTek's ECM Connector Framework may be found on Pegasystems' [Developer Network](#) or on the [TriTek web-site](#). Contact a TriTek representative at [products@triteksol.com](mailto:products@triteksol.com) to schedule a product demonstration and discuss how the Connector can address your PRPC integration challenges.
